development  
director*

Chester has been involved in technology since the "glass house" days of the early 70's. He has served in several large technology companies, insurance carriers and managed technical resources as well as management personnel. Chester was involved in the industry in the transition from analog to digital and the convergence of voice and data.

Chester not only understands the technical jargon, but grew in leadership roles to include project management and customer support. These roles led to increasingly specialized involvement in all facets of support, to include sales, support and the management of large scale technology refreshes and large project management jobs. Chester understands the role a sales and support professional plays in guiding a client thru the process. It's a natural progression to grow from a support and technical role to a guidance and consultative platform, while keeping the clients best interests forefront. ***Let me show you how my years of experience can help you feel good about the "IT" experience.***

Code Blue Technology (CBT) was founded by Trey Hayden. Mr. Hayden built a successful career and book of business for two prior companies since beginning his career in 1990. Today CBT services over 350 active clients from southern Maryland to northern North Carolina.

Since beginning operations in 2003, CBT has earned the status of Microsoft Gold Certified Partner and Cisco Select Partner. CBT was one of the first 25 companies in Virginia to earn the designation of Microsoft Small Business Specialist, a newly formed designation from Microsoft in late 2005. CBT was also one of the first 50 companies in the mid-Atlantic region to earn the designation of Cisco Select Partner, a newly formed designation by Cisco in 2007. These designations are bestowed upon companies that have passed a series of rigorous tests and have proven competency in marketing, selling, planning, and building solutions for business and government.

Today CBT is an entity that employs seasoned engineers. Each engineer is certified and/or experienced in consulting and support of local and wide area networks, desktop and server computing and routing and switching equipment. We have all the tools necessary to provide a complete support solution for each of our valued clients. ***The philosophy at CBT is to build relationships with our clients and to become their trusted advisor in matters of technology.***
