

PeopleFirst Support

When your **People** Depend on IT

Your team deserves the help they need, without the concern of which device, which service and the hourly cost of the unknown issue.

Hardware/Software

Each element of your network is maintained and supported by CodeBlue's internal staff of engineers.

Security Included

Keeping your team safe is *still* one of our top focuses. We provide the technology and the education needed to keep your data safe.

3rd Party Support

Our team integrates with your printer company, web developers, finance software support, premise security and more.

On-Site and Remote

PeopleFirst is about you! We love to help, whether it is in-person or remotely. Our program includes coverage for both.

Why PeopleFirst?

Hardware changes, People need it.

Taking care of your hardware, while supporting people is what this is all about.

Owners need their time back

Your team interfaces with CodeBlue support directly. Without having to filter requests, requests are served quickly.

A fresh approach

IT support has been about the hardware for too long. People need their tools to work and they need help in the moment. We are here for that!

Time and Materials Support

“The freedom of predictable costs is real. Per-Person-Pricing has taken the fear out of calling IT support.”
